

Time / Cost Estimate

Time: Prep - 40 min / Active - 1 hr

During class, the students will rotate between the three different stations. This will take up to three quarters of the class time (allow 5 - 10 minutes per station). The remainder of the class time can be spent repeating one of the stations, going over explanations and discussing the handout questions or other related topics.

Initial Cost: \$42.00

The cost of the activity can be reduced by getting students to bring in certain supplies. The most expensive item is the rubbing alcohol; however, it can be reused in repeat demonstrations or bucket C at Station III can be omitted.
