

Time / Cost Estimate

Time: Prep - 30 min / Activity - 30 min / Wait - 20 min

All of the steps can be performed by the students; however, preparing the agar gel and the styrofoam comb can be done ahead of time. Allow approximately 20 minutes for the colours to migrate.

Initial Cost: \$137.50

Although the initial cost may seem expensive, the most expensive items are reusable. Even though the agar, food colouring and baking soda are consumable items, they are bought in excess and the supplies will last for multiple activities.
