

Time / Cost Estimate

Time: Prep - 15 min / Active - 45 min

This activity requires a short preparation time in order to build the rocket launcher. Since the launcher can be reused in future demonstrations, this represents a one-time investment. Although *Indoor Rockets* was designed with a single rocket launcher in mind, a large class might benefit from an additional launcher. If the teacher chooses to build additional launchers, the preparation time must be adjusted accordingly.

Initial Cost: \$19.00

The most expensive item in this activity is the bellow pump. Building additional launchers will raise the cost. However, the pump, as well as the entire rocket launcher, can be reused in future demonstrations.
