

Glossary

corolla - the term for the petals of a flower as a group.

dye - a coloured soluble substance that can stain objects.

petal - the brightly coloured part of a flower meant to attract pollinators, like bees.

phloem - one of the types of transport tissue in plants. Phloem carries sugar made during photosynthesis from the top to the bottom of the plant.

transpiration - the process of water evaporating from a plant.

xylem - another type of transport tissue in plants. Xylem transports water and minerals from the roots to the top of the plant.
