

Time / Cost Estimate

Time: Prep - 30 min / Active - 1 hr

The prep time involves making the calculations for sizing the sundial, collecting the materials and understanding the procedure. The active time does not include time for teaching the concepts involved in the activity.

Ideally, *The Human Sundial* would be a long term activity that is repeated at various times throughout the year, introducing new concepts each time. However, it also works well as a single activity. A small amount of time should be allowed at regular intervals throughout the day to make marks on the sundial for the first method. The second sundial can be checked at the same time.

Initial Cost: \$14.00

This represents the cost to create a pair of sundials.
